

**AMENDMENTS TO THE SPECIFICATION**

On page 1 of the specification, on lines 22-23, please correct the following reference:

Distance pieces or filling chocks have traditionally been made of pieces of trimmed wood. In recent years, however, various wedges made of plastic have been developed, c.f. e.g. EP 08 443 444 0 844 344. Since components like windows and doors were previously kept in place by a screw or nail acting on the component in a direction towards the wedge, the wedges had to be left in place after the final fixation. The invention of new location screws which fixate the component in any direction relative to the building has implied new ways of fitting the components and typically, the wedges are removed from the gap as soon as the location screws are attached.

On page 7 of the specification, between lines 5 and 6, please insert the following paragraph:

Fig. 11 is an exploded view of a distance piece.
